Access Points

Objects (1)

Objects are the fundamental entities stored in Amazon S3. You can use [Amazon S3 inventory](#) to get a list of all objects in your bucket. For others to access your objects, you'll need to explicitly grant them permissions. [Learn more](#)

🔍 Find objects by prefix

Lambda-image-process-roleInfo

Delete

Allows Lambda functions to call AWS services on your behalf.

Create functionInfo

Choose one of the following options to create your function.

☒ Author from scratch

Start with a simple Hello World example.

☐ Use a blueprint

Build a Lambda application from sample code and configuration presets for common use cases.

☐ Container image

Select a container image to deploy for your function.

Basic information

Function name

Enter a name that describes the purpose of your function.

image-processor

Function name must be 1 to 64 characters, must be unique to the Region, and can't include spaces. Valid characters are a-z, A-Z, 0-9, hyphens (-), and underscores (_).

RuntimeInfo

Choose the language to use to write your function. Note that the console code editor supports only Node.js, Python, and Ruby.

Python 3.10 ▾

⌚

Permissions

By default, Lambda will create an execution role with permissions to upload logs to Amazon CloudWatch Logs. To use a different role, choose Custom execution role under Additional settings.

Versions

Update from a file in Amazon S3

When you upload a new .zip file package, it overwrites the existing code.

Amazon S3 link

Paste an Amazon S3 link to your function code .zip.

s3://lambda-code-pixelator/my-deployment-package.zip

Encryption with an AWS KMS customer managed key

☐ By default, Lambda encrypts the .zip file archive using an AWS owned key.

No environment variables

No environment variables associated with this function.

Edit

Edit environment variables

Environment variables

You can define environment variables as key-value pairs that are accessible from your function code. These are useful to store configuration settings without the need to change function code. [Learn more](#)
